Cow Eye Dissection Worksheet Answer Key

Obtain a cow eye, place it in your dissecting pan, & rinse the eye with water. Rotate the eye until the larger bulge or tear gland is on the top of the eye. The eye is now in the position it would be in a body as you face the body. On the outside of the eye, locate the following parts: fat- surrounds the eye & cushions it from shock

Eye Dissection - BIOLOGY JUNCTION

1. Place the cow eye on a dissecting tray. The eye most likely has a thick covering of fat and muscle tissue. Carefully cut away the fat and the muscle. As you get closer to the actual eyeball, you may notice muscles that are attached directly to the sclera and along the optic nerve. These are the extrinsic muscles that allow a cow to move its eye up and down and from side to side. Keep cutting close to the sclera, separating the membrane that attaches the muscle to it.
