These two models are designed to provide Quality of Service (QoS) in the network. 1. Integrated Services(IntServ) Integrated service is flow-based QoS model and designed for IP. In integrated services, user needs to create a flow in the network, from source to destination and needs to inform all routers (every router in the system implements ...

Quality of Service (QoS) in Computer Network

What is QoS in networking? QoS or Quality of Service in networking is the process of managing network resources to reduce packet loss as well as lower network jitter and latency. QoS technology can manage resources by assigning the various types of network data different priority levels. QoS is usually applied on networks that cater to traffic that carry resource-intensive data like:

What is QoS in Networking - Plus Best QoS Monitoring Tools

The book Networking Services: QoS, Signalling, Processes by Harry Perros deals with the very important topic of delivering networking services over the Internet, such as Voice over IP, video conferencing, and IPTV.
