Time Management for System Administrators: Stop Working ...

Fortunately, system administrators can be very adept at dealing with challenges. A good time management system is based on the principles of using one system, conserving brain power, and using routines. In order for the system to be effective, policies must be in place to support it. The three key policy points are defining the official ways for users to get help, the scope of the work supported, and what constitutes an emergency. The system administrator has two basic tools for managing ...

That's why it focuses on strategies that help you work through daily tasks, yet still allow you to handle critical situations that inevitably arise.

Time Management for System Administrators ()

A system administrator, or sysadmin, is a person who is responsible for the upkeep, configuration, and reliable operation of computer systems; especially multi-user computers, such as servers. The system administrator seeks to ensure that the uptime, performance, resources, and security of the computers they manage meet the needs of the users, without exceeding a set budget when doing so. To meet these needs, a system administrator may acquire, install, or upgrade computer components and softwar
